What is Data Science?

DATA SCIENCE

DATA MINING

DATA ANALYTICS

DATA COMPILING

DATA PROCESSING

DATA ARCHITECTURE

DATA APPLICATION

DATA PRESENTATION

What Capabilities can we leverage?

The field has changed rapidly over the last 10 years.

We excel at rapidly learning and implementing new methodologies and technologies.

Therefore, we have a wide range of tools at our disposal:

- AI & Machine learning
- Generative AI – Large Language Models LLMs (GPT etc.)
- Natural Language Processing (NLP)
- Audio Processing
- Computer Vision
- Predictive analytics
- Statistical and Data analysis
- Data Visualisation

What Data Science isn't

A solution on its own without context and collaboration

Blind to the business realities

Garbage In, Garbage Out

How do we utilise
Data Science at
Allan Webb?

Case Study

Extracting insights from
AESPs with AI and
Automated Processes

AllanWebb

Smart Search AESPs

Features and Benefits

Uses free-text queries so engineers can better describe the exact information they are looking for.

Finds relevant sections in publications based on the user's query. Retrieves the correct document and page number.

Returns the answer directly to the user. For example, a maintenance procedure with the associated steps.

FUEL DELIVERY SYSTEM – V8

V8 Fuel Delivery System

Fuel Delivery System Components

The Land Rover V8 fuel delivery system comprises the following main components:

- Saddle type fuel tank
- Fuel injectors
- Non return fuel rail
- Fuel pump
- On board refuelling vapour recovery system (NAS only)
- Tank leakage detection system (NAS only).

Fuel Tank

The fuel tank is constructed from moulded plastic and is mounted under the rear seat just forward of the rear axle. The fuel tank has a 100 Litre capacity and activates a low fuel warning lamp in the instrument pack when there is 12 litres in the tank. The tank is of the saddle tank design with a siphon jet pump in the left side to transfer fuel to the right side where the fuel pump is mounted. The fuel is delivered along pipes that run along the underside of the vehicle to a fuel rail mounted on the engine.

Fuel Filter

The fuel filter/pressure regulator is mounted on the lower right hand side of the tank. The charcoal canister is mounted at the front of the tank on the right hand side. The components are covered by a plastic under tray to protect them when driving off-road. The undertray has an inspection cover to enable access to the charcoal canister and the fuel filter.

Fuel Pump

The fuel pump comprises a pump, sender unit, pot and venturi. The unit has an integral filter inside the pot. The pump unit operates at 3.5 bar for 170–205 l/hr (the V8 has a maximum operating requirement of 90 l/hr).

The pump is controlled by the ECM via the fuel pump relay.

Collaboration Opportunities

Partnering for the Future

Simon Pettersson

Director Defence Industry Vertical

Eurostep

eurostep is world class in

- Product data technologies and related standards
- Product data sharing across disciplines, enterprises and over time
- Managing change across heterogeneous systems and organizations

• Experience

- 25+ years of experience of customer projects, international standardization and software product development with ShareAspace

Connect your data across systems & teams in:

Manufacturing

Take control of your manufacturing data and form a resilient supply chain

ShareAspace product suite

ShareAspace^{Server}

Through Life Configuration Change Management for Digital Twins and the Digital Thread

- Enables seamless integration of processes and systems across business domains and organisation boundaries.
- A robust, configurable tool for secure multi-enterprise collaboration.

ShareAspace^{D2M}

Streamline collaboration between OEMs, Primes, Suppliers, & Partners

- Streamline your product data supply chain collaboration and data acquisition processes while safeguarding data.
- **Benefits:** Secure and efficient collaboration between Operators, Primes and suppliers.

ShareAspace^{ExC}

Controlled data sharing across global value chains

- Simplify and secure compliance with export and import regulations.
- **Benefits:** Protect sensitive information and ensure regulatory alignment.

KONGSBERG

ShareAspace case studies

Kockums – PLM Backbone

Scope:

- Configuration Management in a PLM backbone

Challenge:

- Significant change in IT systems architecture going from document- to model-based development.
- Need to enable cross discipline work in order to reach targets in cost and lead time reduction.

Solution:

- Using ShareAspace as an information backbone to integrate existing design and manufacturing tools

Business Benefit:

- Standards based information model enables cross functional integration
- Backbone enable continuous use of Best-of-breed tools in design and manufacturing engineering
- Integration with a memory

9 years
of operation

ShareAspace

ShareAspace case studies

Kongsberg – Configuration Management

Scope:

- Configuration Management and External Collaboration through product lifecycle

Challenge:

- Share product data with customers and partners
- Consolidation of as-design, as-built and as-maintained

Solution:

- Configuration Management repository and customer Collaboration Portal using ShareSpace

Business Benefit:

- Improved quality in information deliveries
- Reduced manual work creating information packages
- More efficient partner and customer communication

Individuals**

ShareSpace

ShareAspace case studies

Damen Naval – Collaboration with Equipment suppliers

Scope:

- Vendor data delivery solution for ship design projects

Challenge:

- Secure and validated reception of deliverables from Equipment Suppliers
- To ensure supplier deliverables are available when required by engineering

Solution:

- Supplier document collaboration solution using ShareAspace Design to Manufacturing

Business Benefit:

- Improved quality in information deliveries
- Reduced manual work to expedite supplier deliveries and follow up on internal reviews
- More efficient supplier communication

+100
Suppliers

ShareAspace

ShareAspace case studies

UK MoD – Rosetta

Scope:

- A common Support Information and Knowledge Management (SIKM) system across the fleet of Classes through life

Challenge:

- Controlled Collaboration of a complex, changing data set across the design authority and operating partners
- Consolidation and configuration control of as-design and as-maintained

Solution:

- Configuration Management repository with data feeds from various design environments

Business Benefit:

- Architecture enables build information hand over
- Reduced manual work creating information packages
- Improved data quality
